

EX NO:5	ONLINE COURSE RESERVATION SYSTEM
DATE:	

AIM:

To draw the diagrams [usecase, activity, sequence, collaboration, class, statechart, component, deployment, package] for the Online course reservation system.

SL.NO SOFTWARE REQUIREMENTS SPECIFICATION

1.0 Hardware Requirements

1.1 Software Requirements

1.2 Problem Analysis and Project Plan

1.3 Project Description

1.4 Reference

1.0 HARDWARE REQUIREMENTS:

Intel Pentium Processor I3/I5

1.1 SOFTWARE REQUIREMENTS:

Rational rose / Argo UML

1.2 PROBLEM ANALYSIS AND PROJECT PLANNING:

The requirement form the customer is got and the requirements about the course registration are defined. The requirements are analyzed and defined so that is enables the student to efficiency select a course through registration system. The project scope is identified and the problem statement is prepared.

1.3PROJECT DESCRIPTION:

This software is designed for supporting online course reservation system. This system is

organized by the central management system . The student first browses and select the desired course of their choice. The university then checks the availability of the seat if it is available the student is enrolled for the course.

1.4 REFERENCES:

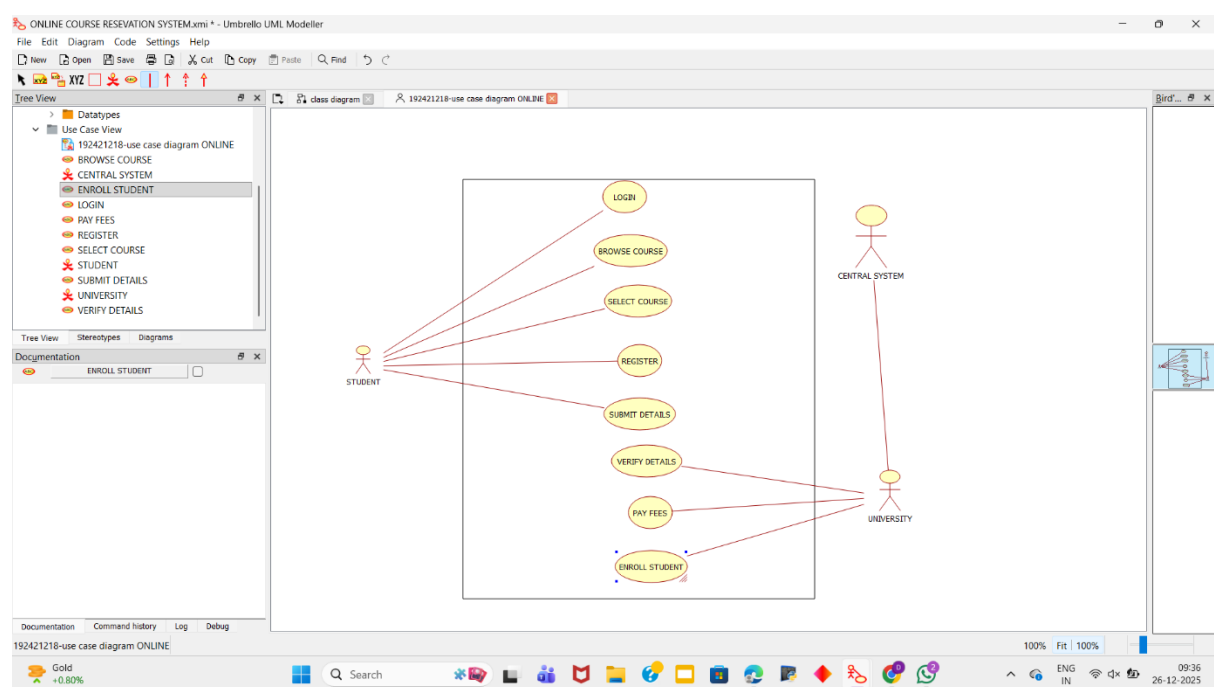

IEEE Software Requirement Specification format.

USE CASE DIAGRAM:

This diagram will contain the actors, use cases which are given below

Actors: Student, University.

Use case: Browse course, select course, register, submit details, verify details, pay fees, enroll student.

CLASS DIAGRAM:

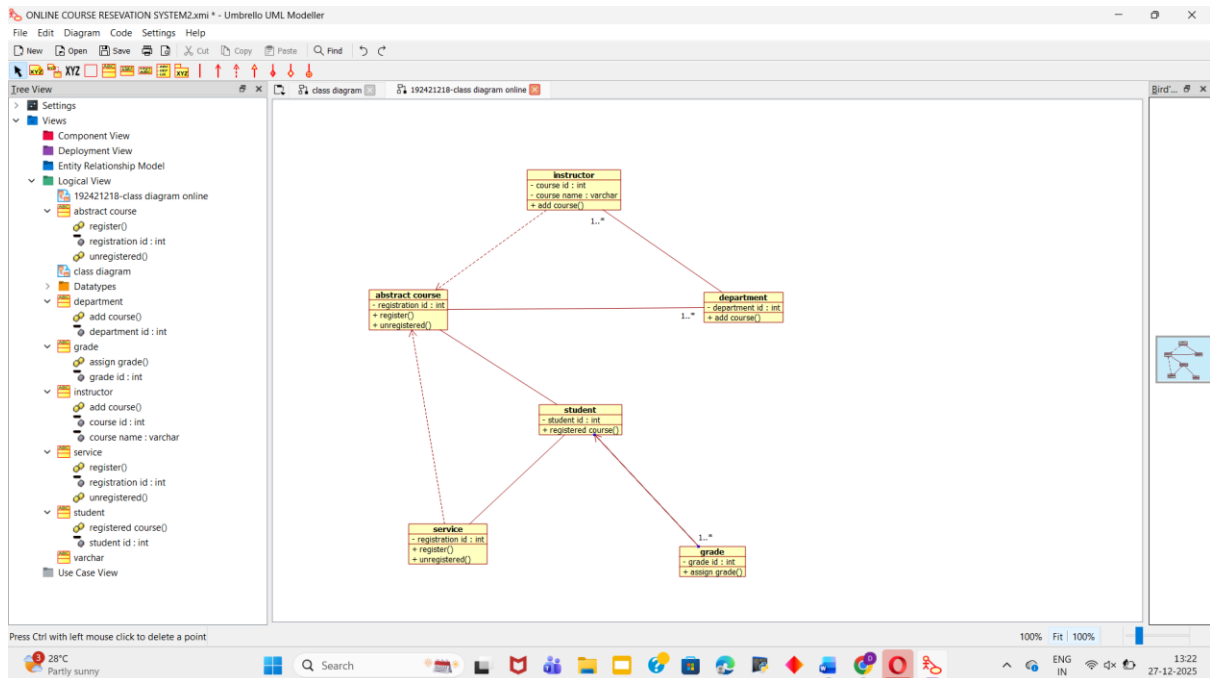

This diagram consists of the following classes, attributes and their operations.

CLASSES ATTRIBUTES OPERATIONS

Central management system Store details Verify()

Student Name and address Browse()

University Store details Verify()

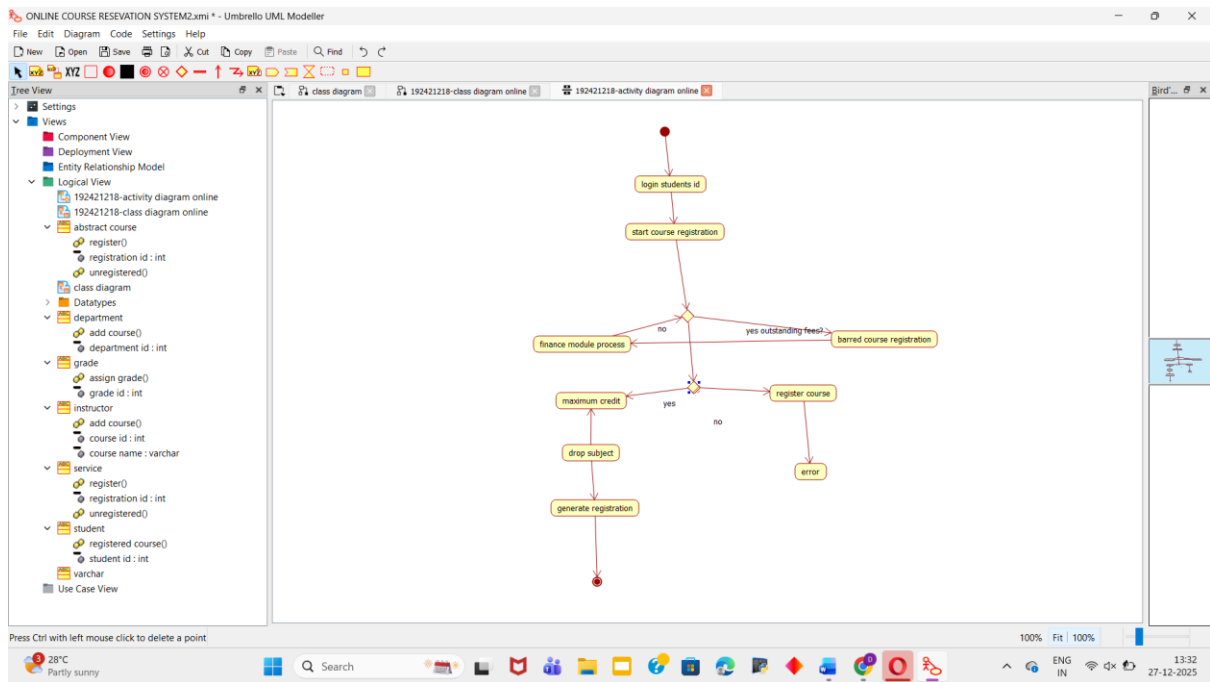

ACTIVITY DIAGRAM:

This diagram will have the activities as Start point ,End point, Decision boxes as given below:

Activities: Browse course, select course, register course, submit details

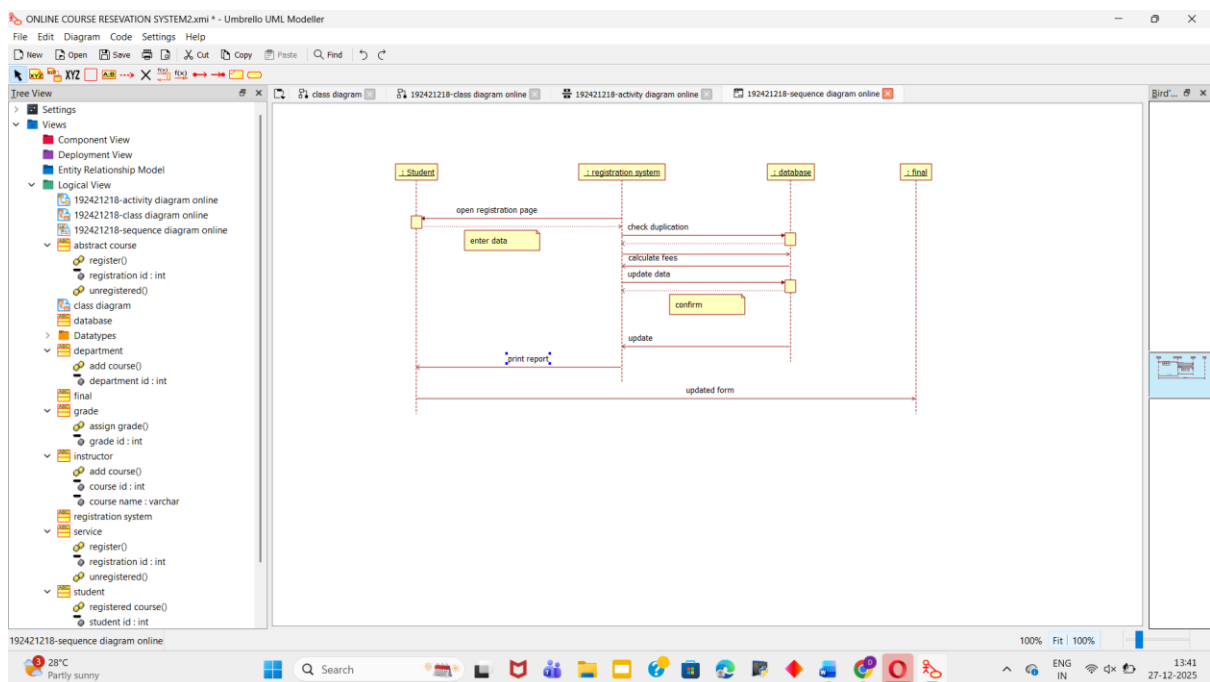

Decision box: check availability or not.

SEQUENCE DIAGRAM:

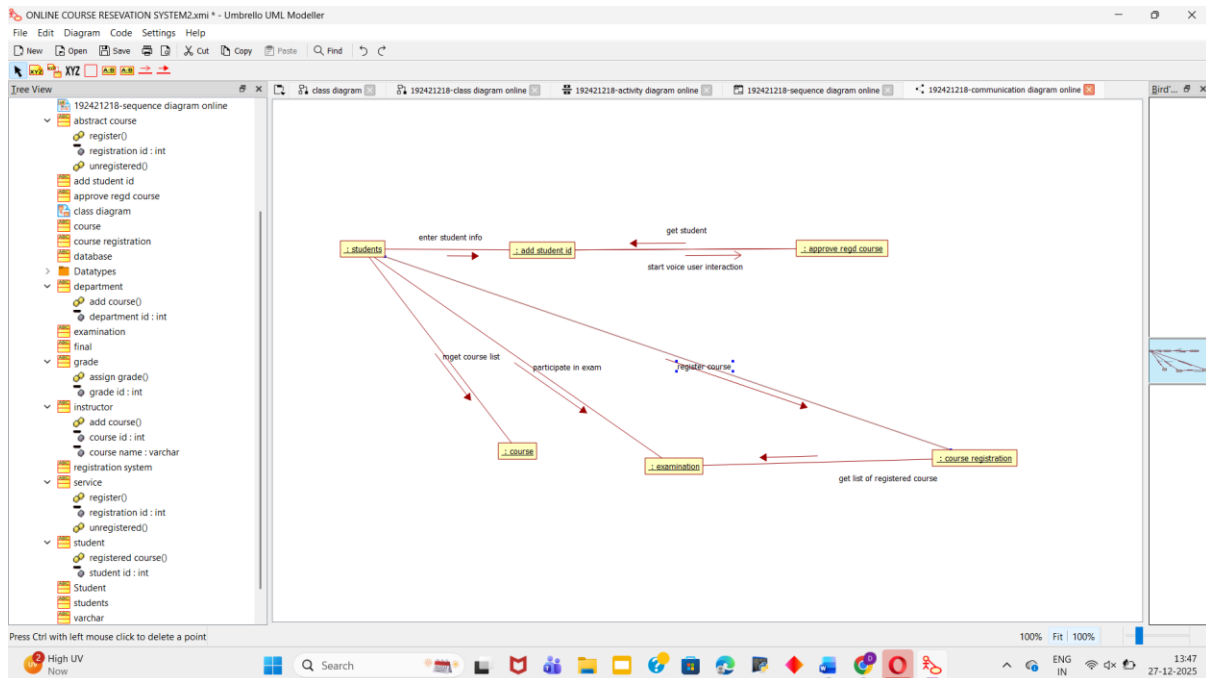

This diagram consists of the objects, messages and return messages.

Object: Student, University, Central management system.

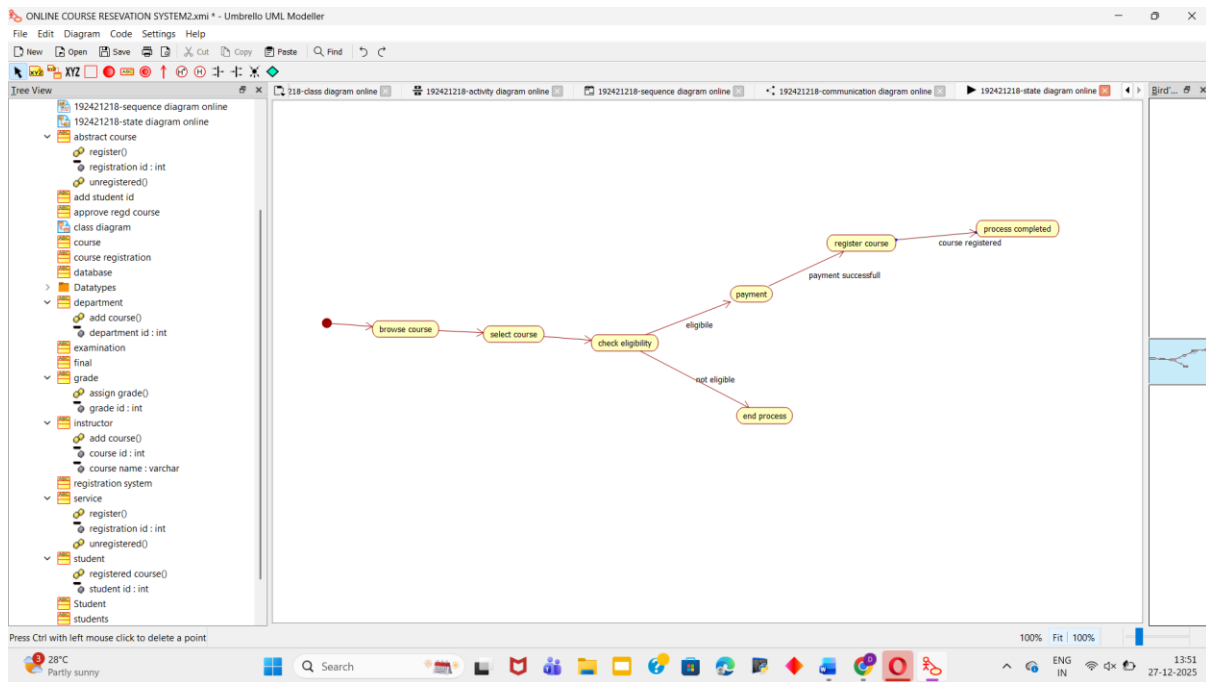

COLLABORATION DIAGRAM:

This will be obtained by the completion of the sequence diagram and pressing the F5 This diagram contains the objects and actors key.

STATE CHART DIAGRAM:

It is a technique to describe the behavior of the system. It describes all the possible states that a particular object gets into the object oriented technique. State diagram are drawn for a single class to show to the lifetime behaviour of a single objects

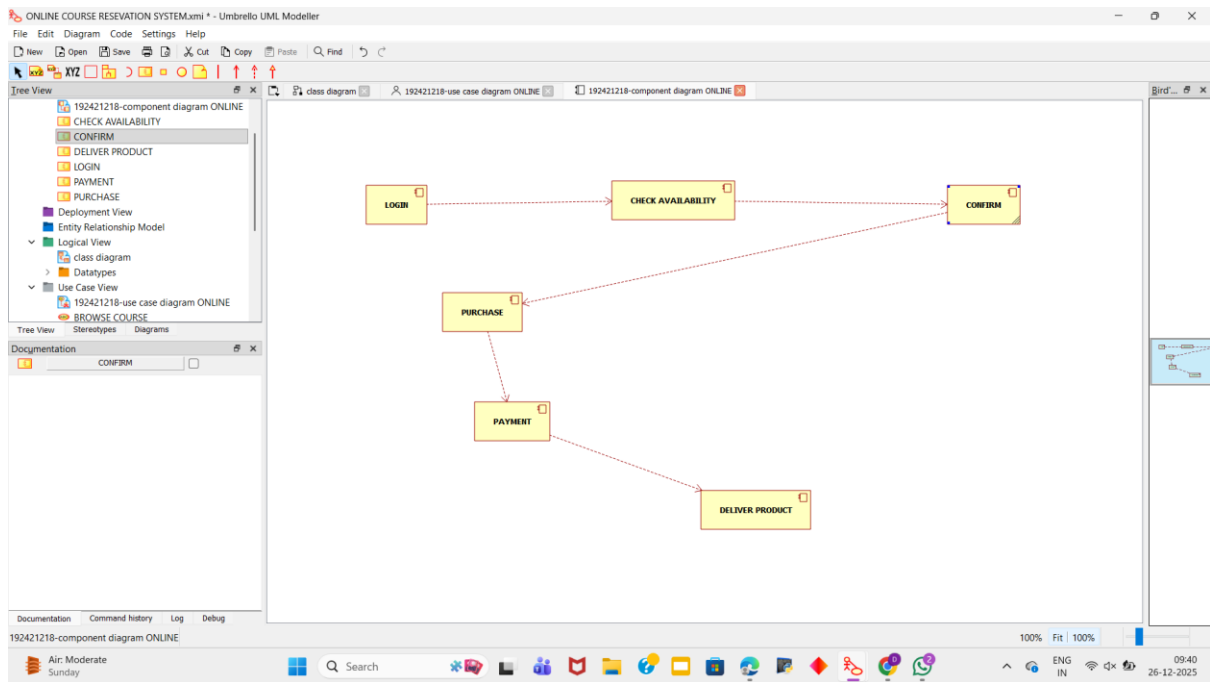

COMPONENT DIAGRAM:

The component diagram is represented by figure dependency and it is a graph of design of figure dependency. The component diagram's main purpose is to show the structural relationships

between the components of a systems. It is represented by boxed figure. Dependencies are represented by communication association

A deployment diagram in the unified modeling language serves to model the physical deployment of artifacts on deployment targets. Deployment diagrams show "the allocation of artifacts to nodes according to the Deployments defined between them. It is represented by 3-dimensional box. Dependencies are represented by communication association.

PACKAGE DIAGRAM:

A package diagram in unified modeling language that depicts the dependencies between the packages that make up a model. A Package Diagram (PD) shows a grouping of elements in the

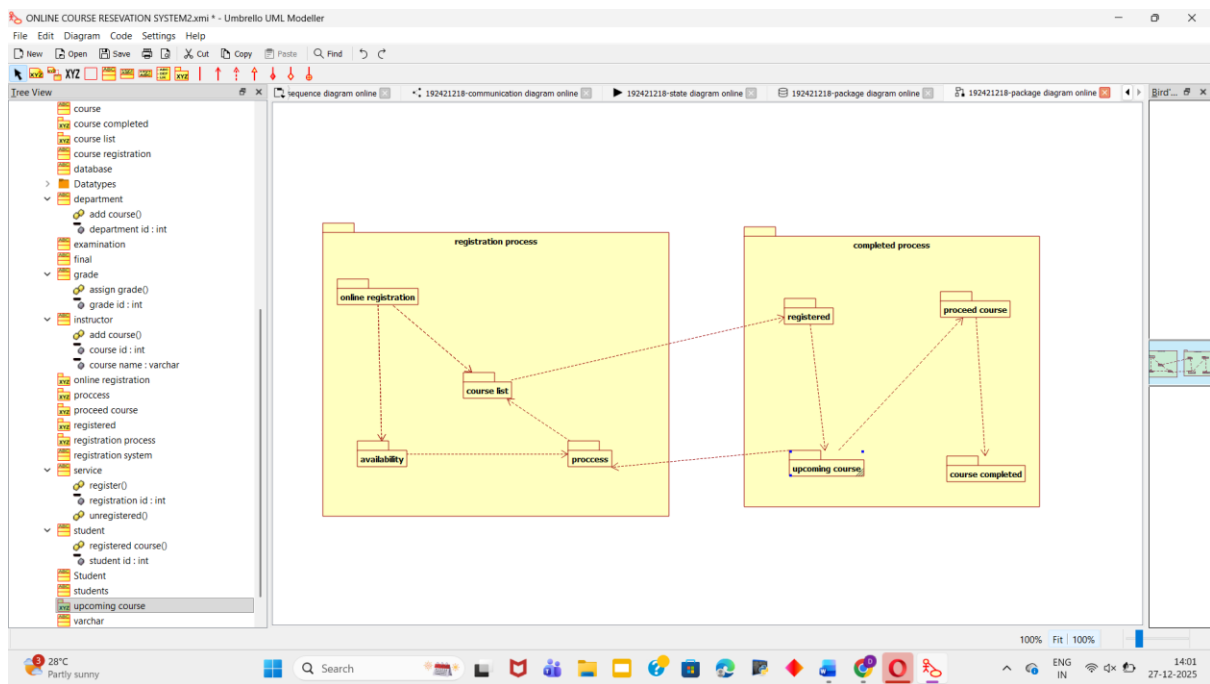

OO model, and is a Cradle extension to UML. PDs can be used to show groups of classes in Class

Diagrams (CDs), groups of components or processes in Component Diagrams (CPDs), or groups

of processors in Deployment Diagrams (DPDs).

There are three types of layer. They are

- o User interface layer
- o Domain layer
- o Technical services layer

RESULT:

Thus draw the diagrams [usecase, activity, sequence, collaboration, class,state chart, component, deployment , package] for the Online course reservation system has been designed executed and output is verified.
