|-----------------------|
| EX NO:6   E-TICKETING |
| DATE:                 |

**AIM:**

To draw the diagrams[use case, activity, sequence, collaboration, class, state chart, component, deployment, package] for the E-ticketing system.

**SL.NO SOFTWARE REQUIREMENTS SPECIFICATION**

**1.0 Hardware Requirements**

**1.1 Software Requirements**

**1.2 Problem Analysis and Project Plan**

**1.3 Project description**

**1.4 Reference**

**1.0 HARDWARE REQUIREMENTS:**

Intel Pentium Processor I3/I5

**1.1 SOFTWARE REQUIREMENTS:**

Rational rose / Argo UML

**1.2 PROBLEM ANALYSIS AND PROJECT PLANNING**

In the E-Ticketing system the main process is a applicant have to login the database then the database verifies that particular username and password then the user must fill the details about

their personal details then selecting the flight and the database books the ticket then send it to the

applicant then searching the flight or else cancelling the process

**1.3 PROJECT DESCRIPTION:**

This software is designed for supporting the computerized e-ticketing. This is widely used by the passenger for reserving the tickets for their travel. This E-ticketing is organized by the central system. The information is provided from the railway reservation system.

## 1.4 REFERENCES

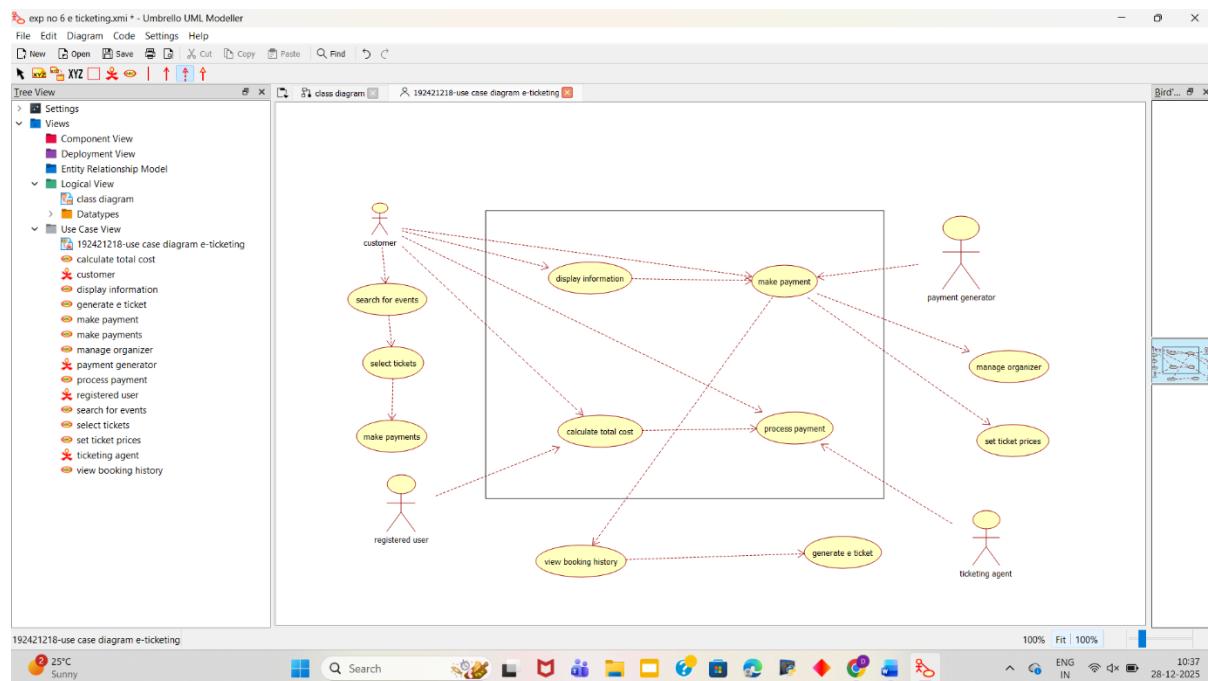

IEEE Software Requirement Specification format.

### USE CASE DIAGRAM:

This diagram will contain the actors, use cases which are given below

Actors: Passenger, Railway reservation system..

Use case: Status, reservation, cancellation, enter the train number, enter the number of seats, availability of seats, acceptance of ticket.

### CLASS DIAGRAM:

This diagram consists of the following classes, attributes and their operations.

#### CLASSES ATTRIBUTES OPERATIONS

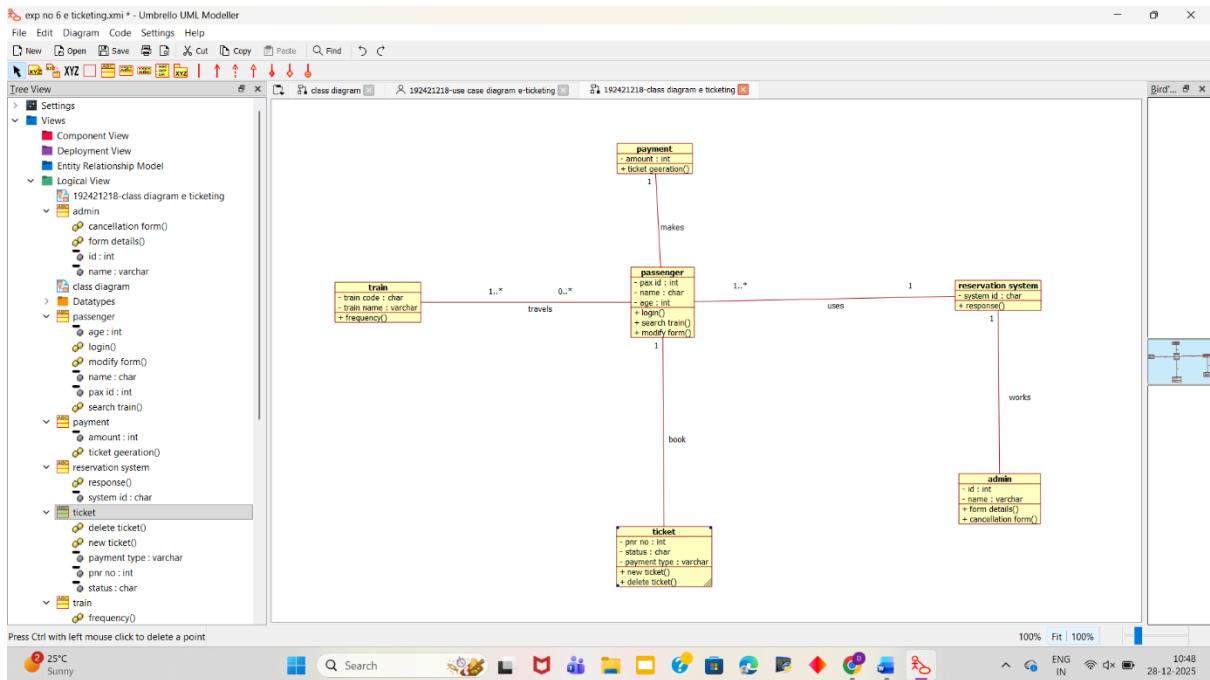

Central computer Train name,

Passenger name

Reservation(), login()

Passenger Passenger age Login()

Railway reservation system Train number Cancellation()

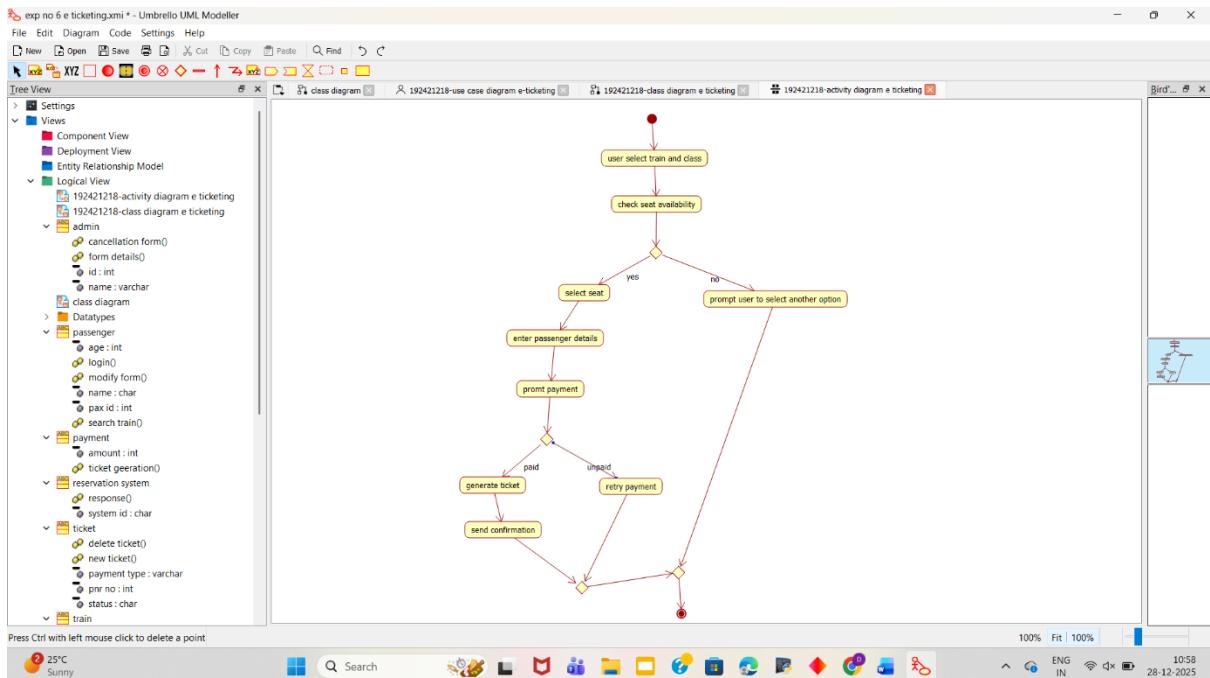

## ACTIVITY DIAGRAM:

This diagram will have the activities as Start point, End point, Decision boxes as given below:

Activities: enter the train number, enter the number of seats, acceptance of ticket, accept seat.

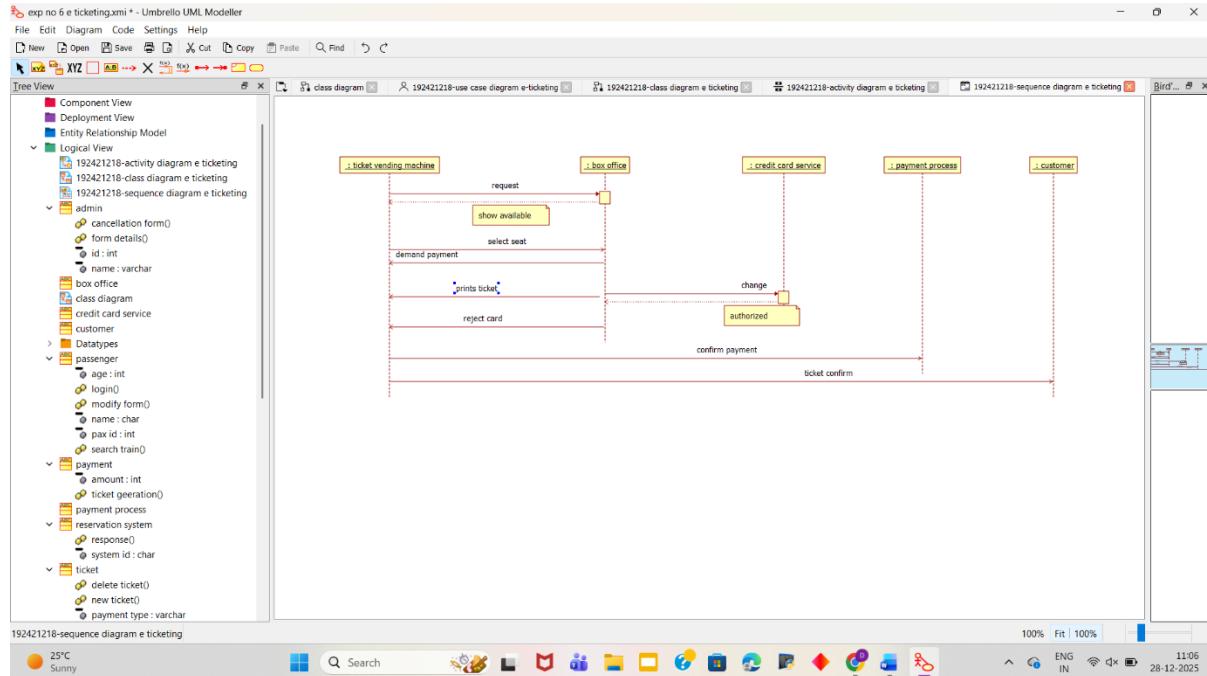

Decision box: Check availability of seats whether it is present or not.

## SEQUENCE DIAGRAM:

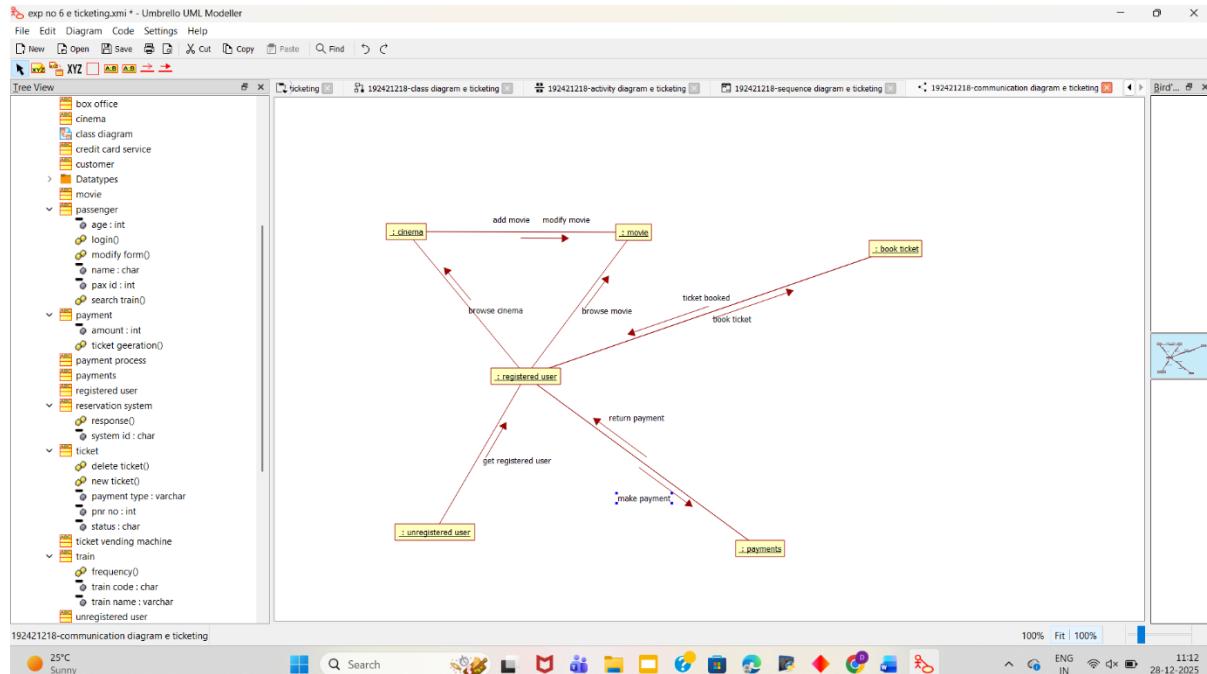

This diagram consists of the objects, messages and return messages.

Object: Passenger, Railway reservation system, Central computer.

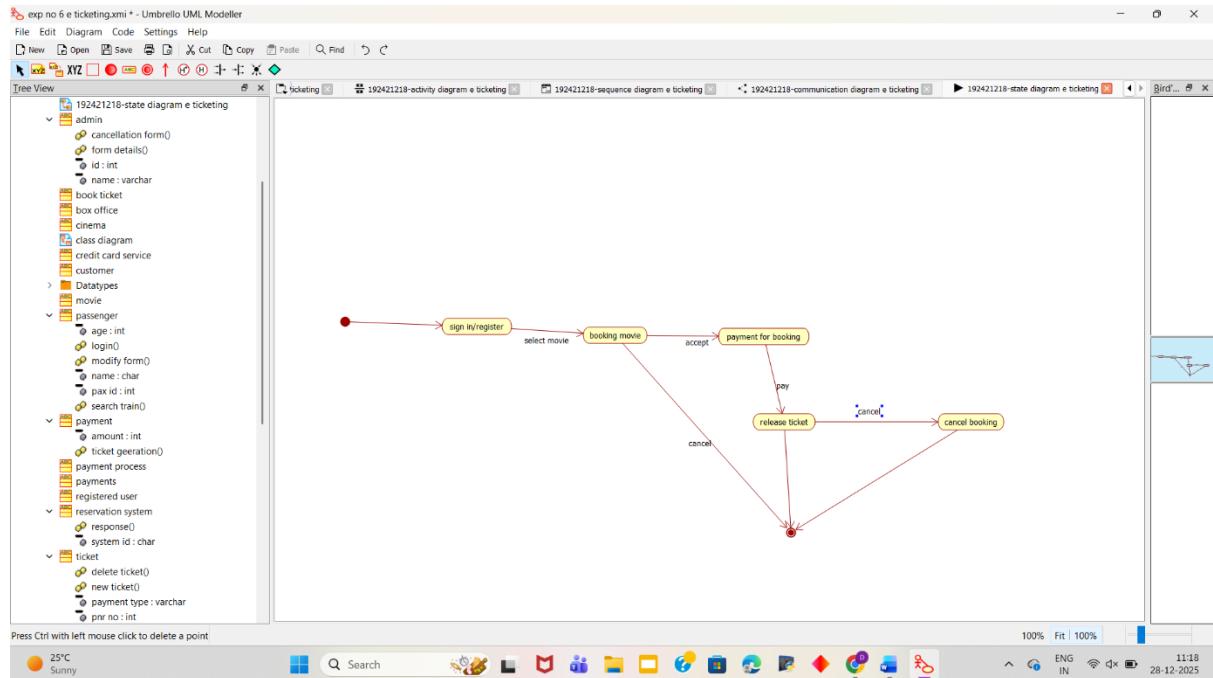

## COLLABORATION DIAGRAM:

This diagram contains the objects and actors. This will be obtained by the completion of the sequence diagram and pressing the F5 key.

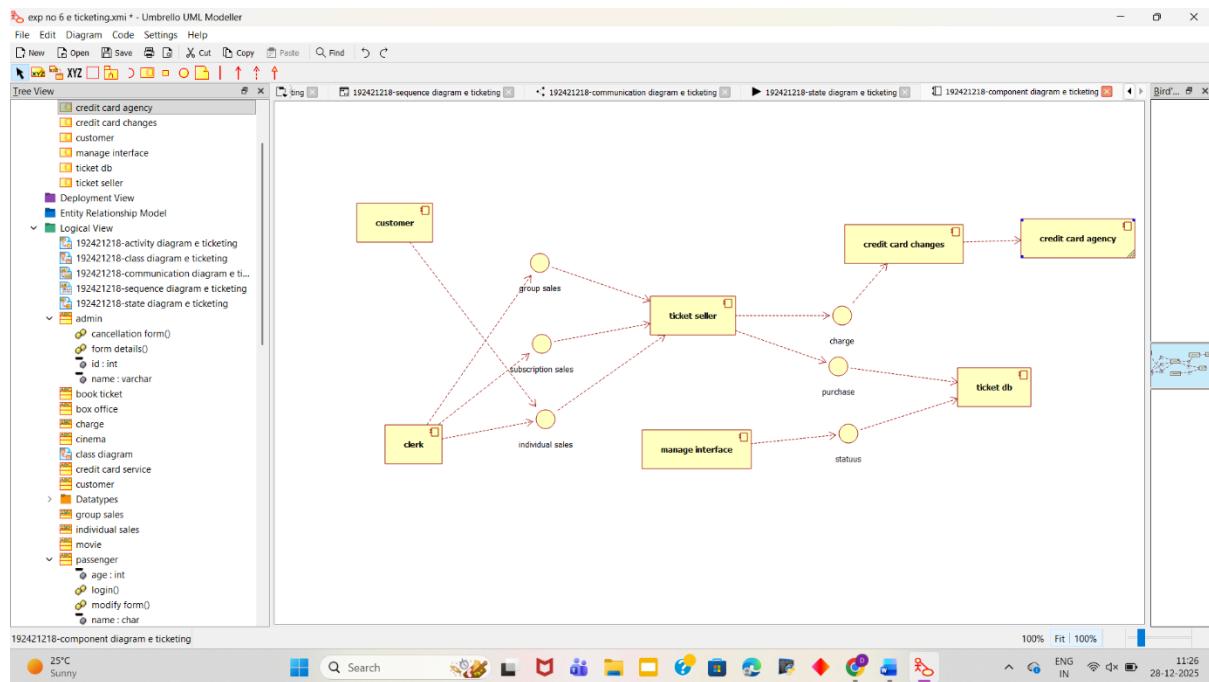

## STATE CHART DIAGRAM:

It is a technique to describe the behavior of the system. It describes all the possible states that a particular object gets into the object oriented technique. State diagram are drawn for a single class to show the lifetime behaviour of a single objects

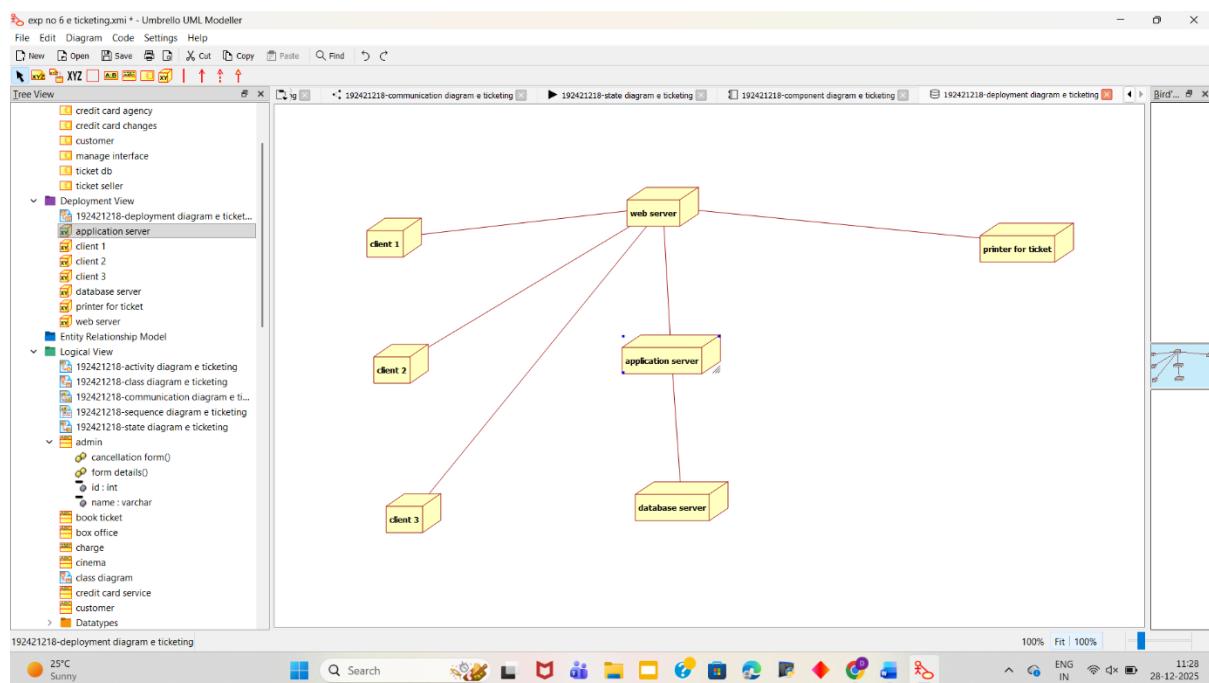

## COMPONENT DIAGRAM:

The component diagram is represented by figure dependency and it is a graph of design of figure dependency. The component diagram's main purpose is to show the structural relationships between the components of a systems. It is represented by boxed figure. Dependencies are represented by communication association

## DEPLOYMENT DIAGRAM:

A deployment diagram in the unified modeling language serves to model the physical deployment of artifacts on deployment targets. Deployment diagrams show "the allocation of artifacts to nodes according to the Deployments defined between them. It is represented by 3-dimensional box. Dependencies are represented by communication association.

## PACKAGE DIAGRAM:

A package diagram in unified modeling language that depicts the dependencies between the packages that make up a model. A Package Diagram (PD) shows a grouping of elements in the

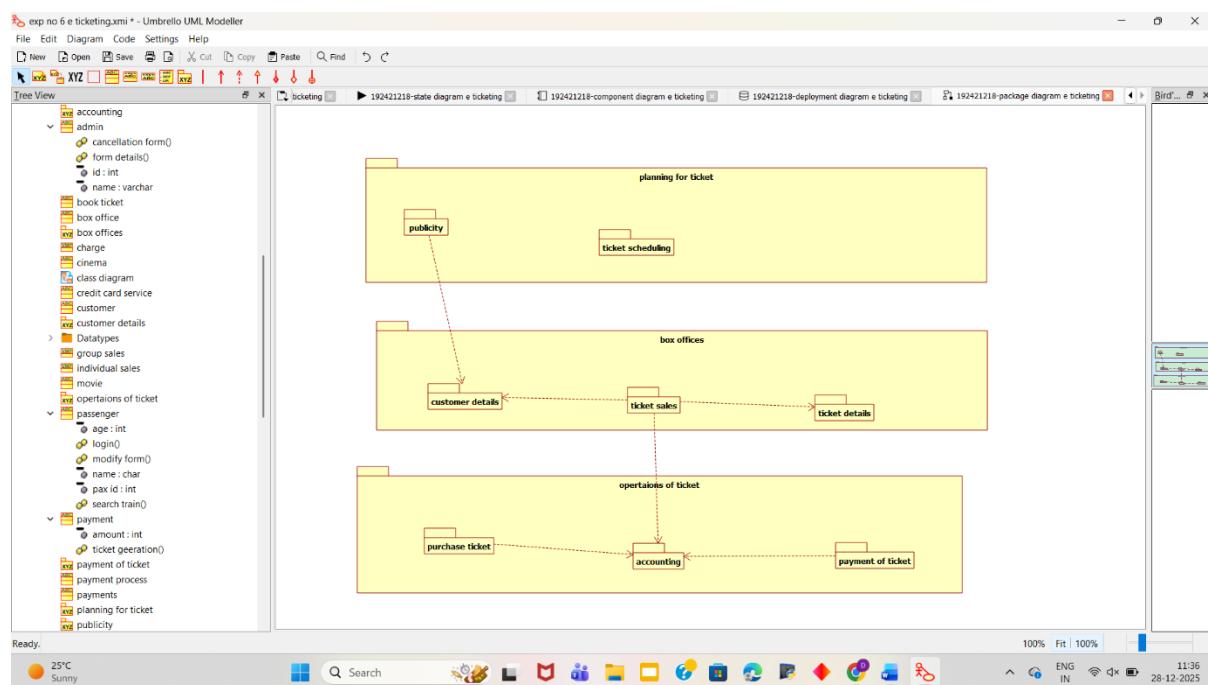

OO model, and is a Cradle extension to UML. PDs can be used to show groups of classes in Class

Diagrams (CDs), groups of components or processes in Component Diagrams (CPDs), or groups

of processors in Deployment Diagrams (DPDs).

There are three types of layer. They are

- o User interface layer
- o Domain layer
- o Technical services layer

## RESULT:

Thus the diagrams [use case, activity, sequence, collaboration, class, statechart, component, deployment, package] for the E-ticketing system has been designed, executed and output is verified.
